

# JOURNAL OF BONE ONCOLOGY

## Aims and Scope

The *Journal of Bone Oncology* is a peer-reviewed international journal aimed at presenting basic, translational and clinical high-quality research related to bone and cancer. As the first journal dedicated to cancer induced bone diseases, the *Journal of Bone Oncology* welcomes original research articles, review articles, editorials, case reports and opinion pieces.

The areas covered by the journal include:

- Bone metastases (pathophysiology, epidemiology, diagnostics, clinical features, prevention, treatment)
- Preclinical models of metastasis
- Bone microenvironment in cancer (stem cell, bone cell and cancer interactions)
- Bone targeted therapy (pharmacology, therapeutic targets, drug development, clinical trials, side-effects, outcome research, health economics)
- Cancer treatment induced bone loss (epidemiology, pathophysiology, prevention and management)
- Bone imaging (clinical and animal, skeletal interventional radiology)
- Bone biomarkers (clinical and translational applications)
- Radiotherapy and radio-isotopes
- Skeletal complications
- Bone pain (mechanisms and management)
- Orthopaedic cancer surgery
- Primary bone tumours
- Clinical guidelines
- Multidisciplinary care
